

BRENTWOOD STATE PARK

SOCCER BALL AND BASEBALL SPORTS SPHERES BRENTWOOD , NEW YORK

Kids have a ball on fun themed climbers at sports facility

- Engineered play spheres to challenge children to move & climb
- Crafted the spheres using resilient, low-maintenance material
- Designed unique play structures that stay in visitors' memories

Challenge:

Long Island State Parks wanted custom play structures for the new sports-themed playground at Brentwood State Park. With funding from Governor Cuomo's New York Works Initiative, the park saw the opportunity to incorporate durable-and fun-spheres that reflect the park's primary function as a sports facility.

Solution:

Our team designed and built sphere climbers in the shapes of a soccer ball and baseball. Each is constructed with GFRC (glass fiber reinforced concrete). The material is non-toxic and will stand up to hot summers and cold winters-and no special maintenance is required. Our child-tested design was crafted to motivate kids to move as well as help increase their core body strength.
