

Canyon Hills T-Rex Climber

LAKE ELSINORE, CALIFORNIA

Realistic dino skull climber adds a fun bite to outdoor living space

- Created a play climber to add distinctive fun to a new home
- Designed the skull based on a real T-Rex skeleton
- Constructed the climber using material resistant to California weather, fire, & natural disasters

Challenge:

Real estate developer Pardee Homes was building a GenSmart Suite in the Meadow Ridge neighborhood of their Canyon Hills development. The GenSmart homes are designed to allow multiple generations to visit, live, and play together. To put a unique spin on the outdoor living space, the developer chose to add a dino-themed climber.

Solution:

We built a DinoBonz T-Rex Skull Climber that spans 5' long and stands more than 3' tall. Modeled from a real dinosaur skull, we crafted this replica from glass fiber reinforced concrete (GFRC), a material so strong and versatile that it's also known as **smart concrete**.

Canyon Hills T-Rex Climber

LAKE ELSINORE, CALIFORNIA

It's environmentally friendly and resistant to fire and the California weather. GFRC doesn't require special maintenance either, giving the home owners more time to enjoy their outdoor space. Since the skull replica is filled in, the climber is a safe structure where kids can play and imagine.

Result:

The T-Rex Skull Climber adds a distinctive touch to the new home model. Whether the home owners are hosting a book club meeting or braving a tween sleepover, the DinoBonz Climber will be a fun focal point.

Next Step:

How can The 4 Kids team make your project a success? From a single play structure to entire playscapes, we'll transform your vision into reality. The initial consultation is free, so contact us—we can't wait to see what you're dreaming up!
